

# BONAPARTE PROJECT, BC HIGH-GRADE GOLD WITH COPPER-GOLD PORPHYRY TARGETS

## WestKam at a Glance

- Vancouver-based junior gold explorer
- Symbol WKG, Toronto Venture Exchange
- Focused on exploring and developing the Bonaparte Gold Project (owned 95.6%), southern British Columbia
- Successful exploration programs in 2013, 2014 & 2015
- 10,000-tonne bulk sample began in 2016

## Bonaparte Gold Project

- Largely unexplored ground covers 2,461 hectares near Kamloops, BC
- Kamloops less than an hour away by highway and 2-wheel drive roads
- High-grade gold results in historic bulk sampling
- Potential for copper-gold porphyry recognized by British Columbia Geological Survey in a 2012 report
- Porphyry potential greatly enhanced by 2013/2014 exploration success
- 2015 program expanded on recent discoveries and drill targets

## Why is Bonaparte Significant?

The property hosts two targets with strong expansion potential:

1. **Discovery Zone:** high-grade gold mineralization in quartz veins
  - Two bulk samples, completed in 1994 and 2010, averaged 26.5 g/t Au and 16.28 g/t Au respectively
  - 2013 & 2014 exploration expanded the high-grade target significantly - 2015 exploration located new vein
2. **Bulk-Tonnage Porphyry:** copper-gold mineralization
  - Copper-gold porphyry potential reinforced in 2012 by a BC Government report
  - 2013 exploration located a large magnetic anomaly, indicating a multi-phase intrusive body normally associated with copper-gold porphyry deposits; work in 2014 expanded target further

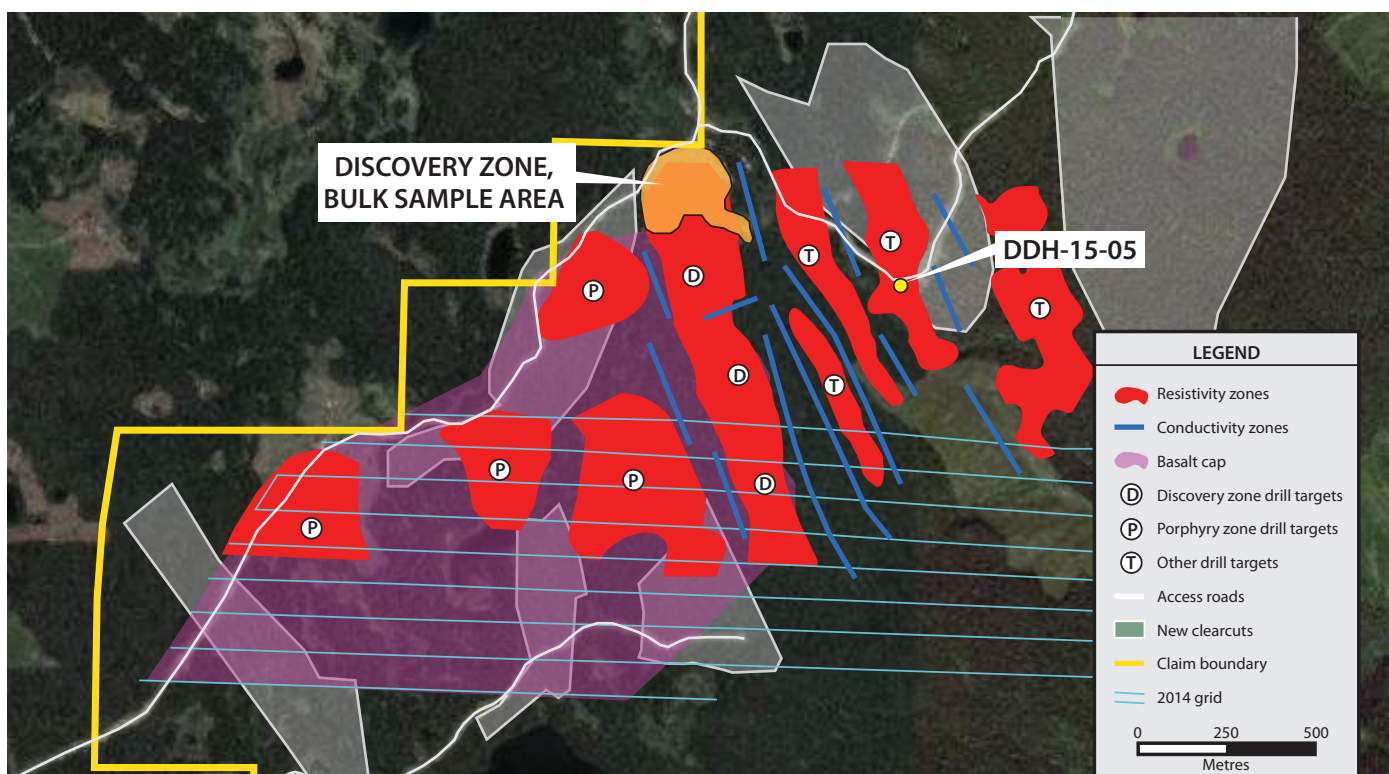

Technical information in this document has been reviewed by R. Kemp, P. Geo., a qualified person as that term has been defined in NI 43-101.

### Numerous Targets Drive Exploration at Bonaparte

Discovery Zone target extended further, with a new vein discovery 450 metres east plus potential porphyry targets

### What's Next at Bonaparte?

10,000-tonne bulk sample began in 2016. Crews advanced the decline towards the Grey Jay/ Crow vein system. Several kilograms of ore grade material have been submitted to Kinross' Kettle River mill facility in Washington State for testing. Work is expected to begin again in 2017.
